## Multisystem Diseases (New Clinical Applications: Nephrology)

During the last decade facilities for treating patients with end-stage renal failure have expanded in all Westernized countries. Partly as a consequence, interest has been stimulated in many multisystem diseases which may progress to chronic renal failure. Some of these diseases such as diabetes mellitus are common but still have controversial aspects to their investigation and management. Others such as lupus nephritis are relatively rare but respond well to recent advances in therapy. In addition to diabetes mellitus and lupus nephritis this volume has chapters on multiple myeloma and Henoch-Schonlein purpura. All the chapters have been written by acknowledged experts who have emphasized the practical aspects of patient management. The information contained in this volume should thus prove of interest not only to nephrologists but to all practising clinicians.

VII ABOUT THE EDITOR Professor Graeme R. D. Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician/Nephrologist to the Grampian Health Board. His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital, Boston, USA. He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland, the Renal Association and the Transplantation Society. He has published widely on transplant and reproductive immunology, calcium metabolism and general nephrology.
