This book covers the four forms of fire: diffusion flames, smoldering, spontaneous combustion, and premixed flames. Using a quantitative approach, the text presents an ideal introduction to the scientific principles behind fire behavior. Individual sections thoroughly discuss such vital issues as heat transfer, ignition, flame spread, fire plumes, and heat flux as a damage variable. Formulas help students examine fire from a quantitative standpoint. While explaining the science of fire, the text applies that science to fire safety design and investigation.
