**Advanced Materials Science and Engineering of Carbon** Michio Inagaki, Feiyu Kang, Masahiro Toyoda, Hidetaka Konno

Carbon materials are exceptionally diverse in their preparation, structure, texture, and applications. In *Advanced Materials Science and Engineering of Carbon*, noted carbon scientist Michio Inagaki and his coauthors cover the most recent advances in carbon materials, including new techniques and processes, carbon materials synthesis, and up-to-date descriptions of current carbon-based materials, trends and applications.

Beginning with the synthesis and preparation of nanocarbons, carbon nanotubes, and graphenes, the book then reviews recently developed carbonization techniques, such as templating, electrospinning, foaming, stress graphitization, and the formation of glass-like carbon. The last third of the book is devoted to applications, featuring coverage of carbon materials for energy storage, electrochemical capacitors, lithium-ion rechargeable batteries, and adsorptive storage of hydrogen and methane for environmental protection, photocatalysis, spilled oil recovery, and nuclear applications of isotropic high-density graphite.

- A progression from synthesis through modern carbonization techniques to applications gives you a thorough understanding of carbon materials
- Covers a wide range of precursor materials, preparation techniques, and characteristics to inspire your own development of carbonization techniques, carbon materials and applications
- Applications-oriented chapters include timely content on hot topics such as the engineering of carbon nanofibers and carbon materials for various energy-related applications

### **From reader reviews:**

#### **Geneva Milbourn:**

Book is to be different per grade. Book for children until eventually adult are different content. As it is known to us that book is very important normally. The book Advanced Materials Science and Engineering of Carbon had been making you to know about other know-how and of course you can take more information. It doesn't matter what advantages for you. The reserve Advanced Materials Science and Engineering of Carbon is not only giving you much more new information but also being your friend when you feel bored. You can spend your personal spend time to read your guide. Try to make relationship using the book Advanced Materials Science and Engineering of Carbon. You never feel lose out for everything in the event you read some books.

#### **Bradford Padgett:**

Reading a publication tends to be new life style within this era globalization. With reading through you can get a lot of information that will give you benefit in your life. Using book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Many author can inspire their particular reader with their story or their experience. Not only the storyline that share in the textbooks. But also they write about the knowledge about something that you need example. How to get the good score toefl, or how to teach your young ones, there are many kinds of book which exist now. The authors these days always try to improve their talent in writing, they also doing some study before they write to their book. One of them is this Advanced Materials Science and Engineering of Carbon.

#### **Jonathan Bean:**

Reading can called head hangout, why? Because when you are reading a book specially book entitled Advanced Materials Science and Engineering of Carbon the mind will drift away trough every dimension, wandering in each aspect that maybe unknown for but surely will become your mind friends. Imaging just about every word written in a reserve then become one web form conclusion and explanation which maybe you never get prior to. The Advanced Materials Science and Engineering of Carbon giving you yet another experience more than blown away your brain but also giving you useful data for your better life on this era. So now let us show you the relaxing pattern here is your body and mind are going to be pleased when you are finished reading it, like winning a. Do you want to try this extraordinary investing spare time activity?

#### **Jose Chapman:**

You can spend your free time you just read this book this guide. This Advanced Materials Science and Engineering of Carbon is simple to develop you can read it in the playground, in the beach, train and soon. If you did not have got much space to bring the printed book, you can buy often the e-book. It is make you better to read it. You can save typically the book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.
