Roll-to-roll vacuum deposition is the technology that applies an even coating to a flexible material that can be held on a roll and provides a much faster and cheaper method of bulk coating than deposition onto single pieces or non-flexible surfaces, such as glass.

This technology has been used in industrial-scale applications for some time, including a wide range of metalized packaging (e.g. snack packets). Its potential as a high-speed, scalable process has seen an increasing range of new products emerging that employ this cost-effective technology:

- solar energy products are moving from rigid panels onto flexible substrates, which are cheaper and more versatile
- in a similar way, electronic circuit ‘boards’ can be produced on a flexible polymer, creating a new range of ‘flexible electronics’ products
- flexible displays are another area of new technology in vacuum coating, with flexible display panels and light sources emerging

Charles Bishop has written this book to meet the need he identified, as a trainer and consultant to the vacuum coatings industry, for a non-mathematical guide to the technologies, equipment, processes and applications of vacuum deposition. His book is aimed at a wide audience of engineers, technicians and production management. It also provides a guide to the subject for sectors in which vacuum deposition is a novel technology, such as solar energy and flexible electronics.

Bishop’s non-mathematical explanation of vacuum deposition technologies will empower a wide range of technicians, production managers and engineers in related disciplines to improve performance and maximize productivity from vacuum coating systems

- Provides the knowledge and understanding needed to specify systems more effectively and enhance the dialogue between non-specialists and suppliers / engineers
- Provides those in the rapidly expanding fields of solar energy, display panels and flexible electronics with the know-how to unlock the potential of vacuum coating to transform their processes and products

From reader reviews:

Merry Springs:

Do you have favorite book? If you have, what is your favorite's book? Publication is very important thing for us to find out everything in the world. Each e-book has different aim as well as goal; it means that e-book has different type. Some people feel enjoy to spend their a chance to read a book. They are reading whatever they consider because their hobby will be reading a book. Think about the person who don't like reading through a book? Sometime, individual feel need book when they found difficult problem or maybe exercise. Well, probably you should have this Vacuum Deposition onto Webs, Films and Foils, Second Edition.

Ariane Swanson:

Book will be written, printed, or outlined for everything. You can understand everything you want by a reserve. Book has a different type. We all know that that book is important issue to bring us around the world. Adjacent to that you can your reading skill was fluently. A publication Vacuum Deposition onto Webs, Films and Foils, Second Edition will make you to be smarter. You can feel much more confidence if you can know about every little thing. But some of you think that open or reading the book make you bored. It is not necessarily make you fun. Why they might be thought like that? Have you seeking best book or acceptable book with you?

Patricia Ackermann:

Beside that Vacuum Deposition onto Webs, Films and Foils, Second Edition in your phone, it might give you a way to get more close to the new knowledge or facts. The information and the knowledge you might got here is fresh in the oven so don't become worry if you feel like an aged people live in narrow commune. It is good thing to have Vacuum Deposition onto Webs, Films and Foils, Second Edition because this book offers to you readable information. Do you sometimes have book but you rarely get what it's all about. Oh come on, that won't happen if you have this in the hand. The Enjoyable arrangement here cannot be questionable, just like treasuring beautiful island. Use you still want to miss the item? Find this book and also read it from now!

Earl Casey:

On this era which is the greater person or who has ability in doing something more are more valuable than other. Do you want to become considered one of it? It is just simple way to have that. What you must do is just spending your time almost no but quite enough to get a look at some books. Among the books in the top list in your reading list will be Vacuum Deposition onto Webs, Films and Foils, Second Edition. This book and that is qualified as The Hungry Hillside can get you closer in becoming precious person. By looking upwards and review this reserve you can get many advantages.
