Robert B. Laughlin

Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow Robert B. Laughlin

In *Powering the Future*, Nobel laureate Robert B. Laughlin transports us two centuries into the future, when we've ceased to use carbon from the ground—either because humans have banned carbon burning or because fuel has simply run out. Boldly, Laughlin predicts no earth-shattering transformations will have taken place. Six generations from now, there will still be soccer moms, shopping malls, and business trips. Firesides will still be snug and warm.

How will we do it? Not by discovering a magic bullet to slay our energy problems, but through a slew of fascinating technologies, drawing on wind, water, and fire. *Powering the Future* is an objective yet optimistic tour through alternative fuel sources, set in a world where we've burned every last drop of petroleum and every last shovelful of coal.

The Predictable:

Fossil fuels will run out. The present flow of crude oil out of the ground equals in one day the average flow of the Mississippi River past New Orleans in thirteen minutes. If you add the energy equivalents of gas and coal, it's thirty-six minutes. At the present rate of consumption, we'll be out of fossil fuels in two centuries' time.

We always choose the cheapest gas. From the nineteenth-century consolidation of the oil business to the California energy crisis of 2000-2001, the energy business has shown, time and again, how low prices dominate market share. Market forces—not green technology—will be the driver of energy innovation in the next 200 years.

The laws of physics remain fixed. Energy will still be conserved, degrade entropically with use, and have to be disposed of as waste heat into outer space. How much energy a fuel can pack away in a given space is fixed by quantum mechanics—and if we want to keep flying jet planes, we will need carbon-based fuels.

The Potential:

Animal waste. If dried and burned, the world's agricultural manure would supply about one-third as much energy as all the coal we presently consume.

Trash. The United States disposes of 88 million tons of carbon in its trash per year. While the incineration of waste trash is not enough to contribute meaningfully to the global demand for energy, it will constrain fuel prices by providing a cheap supply of carbon.

Solar energy. The power used to light all the cities around the world is only one-millionth of the total power of sunlight pouring down on earth's daytime side. And the amount of hydropump storage required to store the world's daily electrical surge is equal to only eight times the volume of Lake Mead.

PRAISE FOR ROBERT B. LAUGHLIN

“Perhaps the most brilliant theoretical physicist since Richard Feynman”

—George Chapline, Lawrence Livermore National Laboratory

“Powerful but controversial.”

— *Financial Times*

“[Laughlin’s] company ... is inspirational.”

—*New Scientist*

From reader reviews:

David Patton:

Do you have favorite book? Should you have, what is your favorite's book? E-book is very important thing for us to understand everything in the world. Each book has different aim or goal; it means that book has different type. Some people feel enjoy to spend their time to read a book. They can be reading whatever they have because their hobby is usually reading a book. Think about the person who don't like reading through a book? Sometime, man feel need book once they found difficult problem or even exercise. Well, probably you will need this Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow.

Brian Nelson:

In this 21st century, people become competitive in every single way. By being competitive today, people have do something to make these people survives, being in the middle of the actual crowded place and notice simply by surrounding. One thing that often many people have underestimated that for a while is reading. That's why, by reading a reserve your ability to survive boost then having chance to stand up than other is high. For you personally who want to start reading the book, we give you this particular Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow book as nice and daily reading e-book. Why, because this book is more than just a book.

Jacob Lehr:

Do you certainly one of people who can't read pleasurable if the sentence chained inside straightway, hold on guys this aren't like that. This Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow book is readable by means of you who hate the straight word style. You will find the information here are arrange for enjoyable reading experience without leaving actually decrease the knowledge that want to deliver to you. The writer regarding Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow content conveys objective easily to understand by many people. The printed and e-book are not different in the information but it just different by means of it. So , do you continue to thinking Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow is not loveable to be your top listing reading book?

Barbra Walker:

You can spend your free time you just read this book this book. This Powering the Future: How We Will (Eventually) Solve the Energy Crisis and Fuel the Civilization of Tomorrow is simple bringing you can read it in the playground, in the beach, train along with soon. If you did not include much space to bring the particular printed book, you can buy the e-book. It is make you much easier to read it. You can save typically the book in your smart phone. And so there are a lot of benefits that you will get when you buy this book.
